

TANITA
Healthy Habits for Happiness

DC-13C

The TANITA DC-13C is a body composition monitor tailored for the retail environment and other high traffic locations. The electrodes of the advanced BIA technology go through the handles. So your patients or clients do not need to remove their shoes. Within just 10 seconds, you can make a complete analysis of the body.

Designed with self-service functionality in mind, the DC-13C features a large LCD screen and a user-friendly interface, so your clients can easily operate the monitor. An easy to understand receipt is printed out, giving an overview of all the health data. Your client can then take this to a professional if further advice is required.

This handy, sturdy and accurate body composition monitor is very suitable for pharmacies, drugstores and events.

Key Features

- **Instant health assessment** in less than 10 seconds
- **Weighing capacity** 270 kg / 100g accuracy
- **No need to remove shoes**
